

TABLE OF CONTENT

Introduction.....	7
Chapter 1. Electrostatics and gravity as components of the unified central field.....	18
§1.1 Field and the Third law of mechanics.....	18
§1.2 Parameters f, s . Unification of central fields.....	21
§1.3 Comparison of parameters of gravity in classical and real electrodynamics....	28
§1.4 Inertia of a particle.....	29
§1.5 Force interaction law in terms of parameters f, s, m	32
Chapter 2. Screening of electrostatic field by matter.....	38
§2.1 Inapplicability of the Gauss theorem in real space.....	38
§2.2 Electrostatic interaction with attenuation of field.....	40
§2.3 Space charge of bodies.....	42
§2.4 Field intensity at surface of semi-infinite space.....	43
§2.5 Electrodynamic equilibrium of contacting media and bodies.....	44
§2.6 Electric potential in charged medium.....	44
§2.7 Potential difference between two points.....	46
§2.8 Potential difference and work.....	47
§2.9 Potential in real electrodynamics.....	49
§2.10 Generalization of the Gauss Theorem.....	50
§2.11 Electric capacity of e-massive sphere.....	52
§2.12 Magnetic moment of space-charged sphere.....	53
§2.13 Concept of local and natural densities of charge and mass.....	54
§2.14 Coefficient of attenuation of electrostatic field by matter.....	57
§2.15 Condition for electric neutrality of medium	58
Chapter 3. Attenuation of gravity field by matter.....	61
§3.1 Equations of gravistatics	61
§3.2 Attenuation coefficient of the gravity field. G-massivity of the Sun.....	65
§3.3 Attenuation of the gravity field by planets.....	67
§3.4 Gravity center shift in the Sun.....	68
§3.5 Inaccessibility of gravitational collapse.....	71
Chapter 4. Electric interaction of Earth with Cosmos.....	73
§4.1 Thundrcloud model of atmospheric electricity and its defects.....	74
§4.2 Electric state of the Earth in real electrodynamics.....	76
§4.3 Daily variations of the atmospheric field intensity.....	80
§4.4 Potential and permittance of the Earth.....	83
§4.5 The Earth charge and atmospheric current variations.....	84
§4.6 Electricity of troposphere.....	87
§4.7 Electricity of upper atmosphere and magnetosphere.....	89

Chapter 5. Electroheating of the Earth	91
§5.1 Heating of the Earth's interior.....	91
§5.2 Heating of the atmosphere.....	97
Chapter 6. Condensation heating of the atmosphere and weather correction	100
§6.1 Electrons are the main condensation centers in the atmosphere.....	100
§6.2 Relation between electricity and thermodynamics in the atmosphere.....	103
§6.3 Mechanisms responsible for charge in the atmosphere.....	104
§6.4 Increase in temperature induced by vapor condensation.....	106
§6.5 Weather correction by atmospheric ionization.....	107
Chapter 7. On the mechanism of global warming	112
§7.1 Non-participation of CO ₂ in global warming.....	112
§7.2 Other mechanisms of warming.....	115
Chapter 8. Charge measurements	121
§8.1 Error arising when the Poisson equation is used.....	121
§8.2 Error in charge density measurement in ion filtration method.....	122
§8.3 Chamber device for the charge density measurement in gas.....	123
§8.4 Measurements of residual charges using Chamber device.....	124
§8.5 Device for the parameter q/ρ measurement.....	125
§8.6 Measurement of the residual charge of molecules using the liquid evaporation method.....	127
§8.7 Charge separation at carbon dioxide evaporation.....	131
Chapter 9. Ball lightning as gas crystal	133
§9.1 Gas crystal in classical electrodynamics.....	133
§9.2 Gas crystal with correction in real electrodynamics.....	139
Chapter 10. Electric interaction of Sun with cosmos	140
§10.1 Defects of hypothesis of internal energy source in the Sun.....	140
§10.2 External source of Sun energy.....	141
§10.3 Quantitative description of the Sun recharging.....	144
§10.4 Instrumental measurement of recharging current.....	149
§10.5 Relationship between parameters of the Earth, Sun, and cosmos.....	152
§10.6 Mass density in cosmic medium.....	153
§10.7 Galactic wave structure.....	155
§10.8 Cosmic mass density, facts and interpretation.....	156
§10.9 Mass density in cosmos and solar cycle.....	158
§10.10 Stored energy and characteristic discharge time of Sun.....	160
§10.11 Scheme of the cosmic influence on the Earth.....	162
§10.12 Comets as electric probes of cosmic space.....	164
Chapter 11. Galactic electricity	166
§11.1 Charge separation and electric circuit of the Galaxy.....	166
§11.2 Acceleration of hydrogen atoms in cosmic space.....	171
§11.3 Nuclear circuit of the Galaxy.....	172
§11.4 Dark matter.....	173
§11.5 Galactic energy restoration.....	174
Chapter 12. Summary of characteristics for the Earth, Sun and Galaxy	175

Chapter 13. Particle, space, field, electric wave	179
§13.1 Hypothesis of relation between space and matter.....	179
§13.2 Energy of electromagnetic wave.....	182
§13.3 Relation between the particle energy and wave.....	183
Chapter 14. Magnetism as effect of central field of moving charge	186
§14.1 Ampere force as a consequence of central field asymmetry for moving charge.....	186
§14.2 Interaction of linear and ring currents.....	193
§14.3 Electromagnetic wave structure	195
§14.4 Error in the Maxwell equation for induction.....	196
Глава 15. Inhomogeneity of space density. Absoluteness and relativity	203
§15.1 Volume and linear density of the space.....	203
§15.2 Inequivalence with respect to moving reference systems	205
§15.3 Time in real and laboratory spaces.....	208
§15.4 Body movement in the space with tangential gradient of density.....	210
§15.5 Description of closed three-dimensional space.....	211
Chapter 16. Structure of atom	211
§16.1 Formation of hydrogen atom and hydrogen-like ion.....	215
§16.2 Planck constant as a combination of electrodynamic constants.....	219
§16.3 Equilibrium of electron in atom.....	22
§16.4 Electron transitions in hydrogen atom.....	224
§16.5 Number of the electron field lines, closed on proton	22
§16.6 Spectral series of the hydrogen atom.....	225
§16.7 Energy emitted by electron in hydrogen atom.....	23
§16.8 Electrodynamic scheme of laser operation.....	23
Chapter 17. Analytical expression for calculations of ionization potentials	23
§17.1 Formulation of interaction.....	23
§17.2 Calculations and results.....	23
Chapter 18. Structure and stability of the atomic nucleus	24
§18.1 Nuclear interaction as the interaction of proton with polarized neutron.....	24
§18.2 Quantitative constructions up to ${}^4\text{He}$	25
§18.3 Structure of nuclei with the mass number $A > 4$	25
§18.4 Limit of nuclear stability.....	25
§18.5 Mössbauer effect.....	25
§18.6 On proportion of proton and neutron numbers in nuclei.....	26
§18.7 Increase in the nucleare charge in the case of neutron polarization.....	27
§18.8 On the structure of the electronic shell	27
Chapter 19. Stability of the neutron	27
§19.1 Neutron characteristics.....	27
§19.2 Neutron decay in classical electrodynamics.....	27
§19.3 Neutron decay in real electrodynamics.....	27
Chapter 20. Deceleration of a body by its own field	28
§20.1 Field deformation of a particle moving with constant velocity.....	28

body.....	282
20.3 Deformation coefficient of the field of accelerating body.....	283
Chapter 21. Assessment of quantum mechanical equations.....	285
21.1 Uncertainty principle of Heisenberg.....	285
21.2 De Broglie wave and the wave-particle duality.....	285
21.3 Schrödinger equation.....	287
21.4 Photoelectric photoeffect.....	288
21.5 Magnetic moment of electron and Bohr magneton.....	288
21.6 Spin of the electron	288
21.7 Magnetic moment of proton and nuclear magneton.....	290
21.8 Compton effect.....	291
21.9 Quantum statistics.....	292
21.10 The Planck expression for black-body radiation	293
Chapter 22. Radiation of a heated body.....	298
22.1 Independence of continuous radiation spectrum of the atomic composition of a body	298
22.2 Ratio of radiation powers of atoms and electrons.....	298
22.3 Frequencies of ion and electron radiation during the atom formation.....	300
22.4 Continuous spectrum of thermal radiation of bodies.....	301
22.5 Electrodynamical interpretation of duality effects.....	305
22.6 Photoeffect in real electrodynamics.....	307
Major differences in representations of traditional physics and real electro- dynamics.....	309
Table of physical constants used in the text.....	312
References.....	313
